Overview

The Foundation: Digestive System First

To kickstart an effective detoxification process, it's crucial to begin by cleansing the digestive system (Layer 1 - Earth) from end to end. Think of it like plumbing – this system can become blocked by waste and toxins accumulating over a lifetime.

The Liver's Critical Role

Then, follow the bloodstream because a polluted intestine transfers waste to the liver (Layer 2 - Wood) to prevent widespread intoxication of other systems and organs.

The Liver as a Warrior:

Like a warrior, the liver purges toxins, breaking them down and storing the waste it accumulates in its tissues. Once the liver purging, done repeatedly, shows positive effects and notable health improvements, it's time to address the next layers.

The Body's Protective Design

Once the liver has been addressed, the body's design continues:

- **Layer 3 - Metal (Lungs)** - Accumulate mucus and external toxins
- **Layer 4 - Fire (Blood & Lymph)** - Hold waste within vessels and cellular fluid

- **Layer 5 - Water (Kidneys)** - Filter blood and eliminate waste through urine

These layers protect themselves by gathering mucus and waste in their tissues to shield against various aggressors like pollution (exogenous) and waste (endogenous). The human body's design is a marvel; it isolates waste to safeguard vital organs!

The ZenCleans Philosophy

There is no magic pill. It takes decades to get intoxicated. When the body calls for help, it is already because it can't cope with the level of toxicity that has accumulated over the years!

The ZenCleans Way is a 6-month detox and rejuvenation schedule to transform one's life. It is divided into six bundles approximately one month each, designed to help gradually dig deeper and deeper into toxicity while constantly taking care of upstream sources of filtration and intoxication.

The FORGIVE Liver Flush Innovation

The ZenCleans liver flush kit is much like a standard version in principle, but we've taken our approach further:

Standard Components:

1. Opening the bile ducts
2. Softening gallstones
3. Stimulating the liver

ZenCleans Enhancement:

- Incorporated active compounds that penetrate liver tissues
- Effectively remove deeply seated toxic substances
- Replaced harsh Epsom Salts with gentle Easing Enzyme blend
- Cleanse digestive tract before and after flush
- Introduced microbial culture to break down lactose (key contributor to liver congestion)
- Included ingredients to enhance detox of intestinal tract
- Nourish gut flora with prebiotics and probiotics
- This enzyme-driven strategy significantly expedites comprehensive liver detoxification

Traditional Chinese Medicine & Naturopathic Medicine

Traditional Chinese Medicine (TCM) Perspective

The Liver in TCM

The liver, in Traditional Chinese Medicine, is considered one of the body's most important organs.

Key Functions:

- Regulate flow of Qi (vital energy) and blood throughout body
- Responsible for storing and releasing blood
- Coordinate functions of body's various organs

The Wood Element

The liver is associated with the **Wood element** and is considered the most important organ for maintaining a healthy and balanced body.

Associated Qualities:

- Associated with planning and decision-making
- Reflects its ability to coordinate and regulate body's various processes

Emotional & Qi Functions

According to TCM theory, the liver is responsible for smooth flow of emotions.

Healthy Liver:

- Emotions will be balanced and harmonious

Imbalanced Liver:

- Can result in emotional disturbances
- Anger, irritability, resentment, guilt
- Strong emotions can cause Qi stagnation
- Lead to various health problems

TCM Recommendations for Liver Health

To maintain liver health:

- In-depth cleansing first
- Proper healthy nutrition
- Regular exercise
- Stress management
- Daily enzyme supplementation

Naturopathic Medicine Perspective

The Liver's Complexity

The liver is one of the body's most versatile and complex organs and the largest organ in the adult body, weighing around 3.3 pounds.

Anatomical Functions:

- Responsible for secreting bile
- Detoxification
- Immunity
- Metabolism

The Liver as Life Force Reservoir

According to naturopathic medicine, the liver is a vital reservoir of the body's life force energy.

Key Characteristic:

- Remarkable ability to metabolize sugar
- Providing essential energy when needed
- Underscores its importance

Liver Strain & Saturation

Unfortunately, the liver can become strained and fatigued, leading to a saturation point, where other elimination systems (such as kidneys) attempt to compensate.

The Two-Step Rejuvenation Process

To rejuvenate the liver, a two-step process is essential:

1. **First Step** - Supporting energy and vitality through:
 - Proper care
 - Intestinal cleansing
 - Alkaline-favoring diet
2. **Second Step** - Only then can a liver purge be considered

Patience is Paramount:

This multi-step process may need to be repeated to achieve comprehensive cleanse, often yielding small stone-like calculi totaling 2 to 3 liters.

Stone Varieties

Stones vary in color:

- **Yellow stones** - Comprised of crystallized mucus and cholesterol
- **Green stones** - Containing chemical residues
- **Red stones** - Potentially lingering since childhood

Results & Benefits

This transformative process is profound, not only for body but also for emotions and overall well-being.

Effectiveness Evidence:

- Health improves
 - Body odor and breath shifts
 - Increased vitality
 - Enduring energy throughout day
-

Anatomy & Physiology

Anatomy of the Liver

The liver is the body's largest internal organ and is located in the upper right quadrant of the abdomen.

Physical Structure

Size & Function Diversity:

- Has anatomical and functional diversity
- Carrying out over 500 different functions
- Includes metabolism, detoxification, regulation of hormone secretion

Lobes & Organization:

- Comprises two lobes
- Each divided into smaller lobules

Blood Supply:

- Hepatic artery takes oxygenated blood from heart to liver
- Portal vein supplies liver with nutrient-rich blood from digestive system
- Hepatic vein drains blood from liver and carries it back to heart
- Receives innervation from autonomic nervous system

Physiology of the Liver

The liver is responsible for a variety of vital functions.

Key Functions

1. Metabolism

- Metabolizes carbohydrates, lipids, and proteins
- Uses enzymes to convert substances into usable forms

2. Detoxification

- Responsible for filtering toxins from blood
- Includes drugs and other harmful substances

3. Bile Production

- Produces bile
- Helps break down and digest fats in small intestine

4. Storage

- Stores excess glucose in form of glycogen
- Stores vitamins, minerals, other nutrients

5. Immune Function

- Plays role in immune function
- Helps remove bacteria and foreign substances from bloodstream

6. Hormone Regulation

- Helps regulate hormone levels
- Produces and breaks down hormones
- Includes insulin and various sex hormones

Summary

The liver is a highly complex organ with wide range of functions essential to maintaining overall health and well-being.

Why the Liver Needs Cleansing

Cleansing the liver can be one of the most critical steps to a well-functioning, healthful lifestyle.

The Liver as Filter

The liver is a filter that eliminates anything from within the body that doesn't belong. It regulates most chemical levels in the blood and excretes a product called bile which helps carry away waste products.

When Toxic & Stressed

When toxic and stressed, the liver lowers its functions, such as:

- Secreting enzymes for digestion
- Absorption of nutrients

Consequence:

- Deprived of nutrition, body gets demineralized
- Creates energy by drawing on its reserves

The Clogging Process

All blood leaving stomach and intestines passes through liver, which breaks down and processes the blood, creating nutrients.

When toxins enter bloodstream:

- Liver is first internal organ to get intoxicated
- Eventually becomes clogged
- Liver and gallbladder accumulate toxins, cholesterol, mucus into gallstones

The Downfall

A toxic and saturated liver allows unwanted particles into circulatory system and represents the downfall of our health as toxicity spreads throughout system.

Why Cleanse

Most Common Symptoms of a Toxic Liver

1. **Fatigue and weakness** - Persistent tiredness and reduced physical strength
2. **Fatty liver** - Accumulation of excess fat within liver, impairing function
3. **Bile duct blockages (gallstones)** - Obstruction of bile ducts by solid particles, leading to pain and discomfort
4. **Jaundice (yellowing of skin and eyes)** - Yellow discoloration due to elevated bilirubin levels
5. **Abdominal pain and swelling** - Discomfort and enlargement of abdomen
6. **Nausea and vomiting** - Feelings of queasiness and forceful expelling of stomach contents
7. **Loss of appetite and weight loss** - Reduced desire to eat and unintentional weight reduction
8. **Dark urine and pale stools** - Urine with dark color and light-colored, clay-like stools
9. **Itchy skin** - Skin irritation and urge to scratch
10. **Confusion and difficulty concentrating** - Mental foggiess and trouble staying focused
11. **Swelling in legs and ankles** - Abnormal puffiness in lower limbs
12. **Increased tendency to bruise and bleed easily** - Enhanced susceptibility to bruising and bleeding
13. **Hormonal disorders** - Irregularities in regulation of hormones
14. **Bad breath problem** - Unpleasant or foul-smelling breath

Deeper Cleansing Option

Gallstones are easy to flush out, but a Fatty Liver requires a consistent approach. Look for our Liver Deep Cleanse and Maintenance protocol. Our Black Vacuum enzyme capsules are designed for this purpose—they break down fat. Consider adding them to your liver hygiene program!

How the Cleanse Works

Before the FORGIVE Liver Cleanse

Fasting Requirement

It is NOT necessary to fast before doing the FORGIVE Liver/Gallbladder cleanse.

Food Preparation

Minimize food intake and eat lightly for a day or two before the cleanse.

Benefits:

- Help lower inflammation
- Boost effectiveness of cleanse
- Encourage more relaxed cleanse day

Pro Tip:

Add more apples or apple juices to diet the week before.

Self-Care Preparation

Cleansing is a beautiful time to focus on self-care. Self-care protocols are included in the day's schedule.

During the FORGIVE Liver Cleanse

Duration & Protocol

The FORGIVE liver cleanse takes one day to perform: by taking the kit's enzymes at timed intervals throughout the day.

Nutritional Support During Cleanse

The FORGIVE cleanse protocol provides a liquid enzyme blend that will provide:

- All vitamins needed

- All minerals needed
- All energy needed for natural detox
- There will be no hunger but sense of fullness

Important Note:

Remember: hunger is often a sense of emptiness and an opportunity to explore feelings often covered up with food and overeating.

What to Expect During Cleanse

Watery Releases:

On the day of liver cleanse, there will be a lot of watery releases. This is part of the preparation for what will come out later. It will stop after you take your liver flush drink.

Easing Enzymes Work:

On the day of cleanse, the "easing enzymes" are working hard to prepare your liver to flush. This process involves dilating your bile ducts, during which you experience what some call "diarrhea."

Clarification:

We call this "watery emissions" because it is not diarrhea, but a sign that your cleanse is doing what it is designed to do so that you have a successful flush. Watery emissions happen on the day you perform the cleanse.

Possible Cleansing Responses

It can be common to experience:

- Bloating
- Gas
- Nausea
- Headache

Important Note:

These symptoms pass as cleansing process progresses.

When Responses Arise:

The following may be helpful:

- Focusing on breath
- Using heating pad
- Warm baths
- Castor oil - only after the flush drink
- Lots of time to rest

After the FORGIVE Liver Cleanse

Results Timeline

The results of liver flush (largest release) are commonly seen towards the following afternoon.

Eating After Cleanse

The day after performing FORGIVE kit, you can begin eating easily digestible foods around noon.

Progressive Eating:

You may begin eating light meals like warm soups, steamed vegetables, low sugar fruits, and anything that will contribute some fibers to sweep out the toxic matters you've just released from your liver. Go slow with small portions; no fat the first day, if possible.

Important Principles:

- Focusing on eating light and healthfully is essential
- Not to shock system
- Remember, body has gone through something extraordinary

Foods to Avoid:

Avoid heavy proteins such as meat, beans, and nuts, which require more work to digest.

How Often to Cleanse

One question often asked is: "How often should we cleanse the liver?"

Answer:

We need to cleanse the liver until the job is done. At first, if one has never cleansed or only cleansed a few times, one will most likely need to repeat treatment quite a few times as:

- Liver is dense and complex organ
- First filter on bloodstream pathway

What Comes Out

The liver is the body's largest filter. It has been filtering all unhealthful elements encountered since birth.

What is released:

Amalgamation of debris in the form of:

- Toxic bile
- Acids
- Chemicals
- Old cholesterol
- Undigested fat
- Gallstones
- Sometimes even parasites

What If Nothing Comes Out

Liver flushing pushes congestion out of liver, and sometimes, the liver can only let go of what it can on any one flush.

Important Understanding:

- We tend to look to "stones" for satisfaction
- All toxicity that comes out is essential to release
- Not just visible liver-gallbladder stones
- Each flush is different
- Each flush is successful
- Whatever comes out is what was ready to go
- Body is far better off without it

FAQ

What Comes Out with a Flush?

The liver is the body's largest filter. It has been filtering all unhealthful elements encountered since birth.

What is released:

An amalgamation of debris in the form of:

- Toxic bile
- Acids
- Chemicals
- Old cholesterol
- Undigested fat
- Gallstones
- Sometimes even parasites

What's the Best Way to Do a Flush?

ZenCleans enzyme cleanses are the easiest and safest method available.

By utilizing enzymes:

- Support and flush liver
- Taking lot of guesswork out
- Getting effective flush
- Learn so much about yourself and body
- Beginning to cleanse body's largest filter
- Wonder how you existed this long without focusing on liver health

What If Nothing Comes Out?

Liver flushing pushes congestion out of liver, and sometimes, the liver can only let go of what it can on any one flush.

Important Understanding:

- We tend to look to "stones" for satisfaction
- All toxicity that comes out is essential to release
- Not just visible liver-gallbladder stones

- Each flush is different
- Each flush is successful
- Whatever comes out on each flush is what was ready to go
- Some flushes seem more productive than others; however, they all work internally to move things forward, regardless of whether we have a substantial release.
- The flush does two things: it pushes things forward in the liver and moves things out of the liver.

Why Do I Have Diarrhea on This Cleanse?

On the day you perform cleanse, the "easing enzymes" are working hard to prepare liver to flush. This process involves dilating bile ducts, during which you experience what some call "diarrhea."

Clarification:

We call this "watery emissions" because it is not diarrhea, but a sign that your cleanse is doing what it is designed to do so that you have a successful flush. Watery emissions usually happen on the day you perform the cleanse.

How Natural Enzyme Blends Cleanse the Liver

Four Key Mechanisms

1. By alkalinizing the digestive system:

- Unclogging liver improves bile flow
- Bile is main compound responsible for alkalization of intestinal tract

2. By lowering unhealthy cholesterols:

- Enzymes remove waste products from liver and blood
- Transform cholesterol that has not been broken down
- Enzymes help blood osmosis
- Promote smooth circulation

3. By safely flushing out wastes, toxins, and gallstones:

- Liver plays a part in over 500 metabolic functions
- So detoxifying gives it back its full power
- Can be felt by noticing vanishing of unpleasant symptoms
- Using enzymes is a more refined and effective process
- Digs deeper into liver in much more gentle manner than any other protocol that can be found

4. By strengthening the liver:

- Removing blockages within liver created by toxins
 - Gives it back its full management power
 - Better digestion of fats
 - Easier weight management
 - Reduced intestinal inflammation
 - More balanced gut flora will be noticed

The 5 Elements & Body Systems

System Overview

The ZenCleans 5 Element Detox & Rejuvenation System addresses different body systems and detox pathways:

1. **Element 1 - EARTH** - Digestive Tract
2. **Element 2 - WOOD** - Liver
3. **Element 3 - METAL** - Lungs
4. **Element 4 - FIRE** - Blood & Lymph
5. **Element 5 - WATER** - Kidneys & Hormones

Each element corresponds to Traditional Chinese Medicine's fundamental organ systems and represents a layer of detoxification.

Summary

Key Takeaways

1. **Critical Second Step** - After digestive cleansing, the liver is the second priority as it filters all blood leaving the digestive system and is the first organ to become intoxicated
2. **One-Day Revolutionary Protocol** - FORGIVE provides profound results in just one day through enzyme technology that softens stones, dilates bile ducts, and flushes toxins safely
3. **Comprehensive Multi-Component System** - Four product components work synergistically: Hygieia penetrates tissues, Apple Enzymes soften stones, Easing Enzymes open pathways, and Flush Drink stimulates release
4. **Safe Alternative to Surgery** - Eliminates need for harsh Epsom salts and saves most people from gallbladder surgery through gentle, enzyme-driven approach
5. **Repetition May Be Needed** - The dense and complex liver requires multiple cleanses until all stones and accumulated toxins are released
6. **Fatty Liver Requires Maintenance** - While gallstones flush relatively easily, fatty liver needs ongoing support with maintenance products like Black Vacuum capsules
7. **Body-Wide Benefits** - Cleansing the liver improves digestion, alkalizes the system, lowers cholesterol, restores energy, balances hormones, and protects all downstream organ systems
8. **Foundation for All Cleanses** - A healthy liver is prerequisite for effective cleansing of all other organs in the 5-Element system
